Professional Summary

Computer Science Engineering student at **K L University**, graduating in 2027 with a specialization in **Artificial Intelligence and Visual Intelligence** and GPA of **8.56/10**. Aspiring AI/ML Developer with hands-on experience in **Machine Learning, Deep Learning, Computer Vision, Python, TensorFlow/Keras, OpenCV, CNN, RNN, LSTM, and transfer learning**. Experienced in developing AI-based projects involving image classification, sequence modeling, emotion recognition, image caption generation, and real-time computer vision.

Education

K L University , Hyderabad, India	2023–2027
B.Tech in Computer Science Engineering – AI & Visual Intelligence	GPA: 8.56/10
Narayana Junior College , Hyderabad, India	2021–2023
Intermediate (Class XII)	GPA: 8.21
Sri Chaitanya Techno School , Hyderabad, India	2019–2021
High School (Class X)	GPA: 10.0

Technical Skills

Programming: Python, Java, JavaScript, TypeScript

Machine Learning: Supervised Learning, Unsupervised Learning, Classification, Regression, Clustering, Feature Extraction, Model Evaluation

Deep Learning: CNN, RNN, LSTM, ANN, Feedforward Neural Networks, Transfer Learning, Backpropagation, Gradient Descent

Computer Vision: OpenCV, Dlib, Object Detection, Face Recognition, Image Processing, Feature Detection

Frameworks/Libraries: TensorFlow/Keras, Scikit-learn, React, Chart.js

Backend/Database: JDBC, REST APIs, SQL, MySQL, Node.js

Tools: Git, GitHub, VS Code

Concepts: Data Structures & Algorithms, OOP, DBMS, Probability, Statistics, Neural Networks, Overfitting, Underfitting, Cross Validation

Work Experience

Tech Mahindra Hyderabad, India

Software Development Intern May 2026 – Sep 2026

Product Inventory Management System *Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, Angular, TypeScript* GitHub

- Developed a full-stack Product Inventory Management System using Java, Spring Boot, Angular, and MySQL to manage product records through end-to-end CRUD operations.
- Implemented RESTful APIs with Spring Boot, Spring Data JPA, and Hibernate for product creation, retrieval, updating, deletion, search, category filtering, and pagination.
- Built a responsive Angular frontend with TypeScript and Bootstrap, integrating product management, input validation, search, filtering, and paginated views.
- Integrated MySQL for persistent product data management and used Swagger UI and Postman for API documentation and testing.

Insurance Product Inventory Management System *Angular, TypeScript, Spring Boot, MySQL, REST APIs* GitHub

- Developed a modular insurance product management platform with Angular and TypeScript covering product catalog, product lifecycle workflow, categories, product managers, analytics, profile, and authentication modules.
- Implemented product CRUD operations with search, category and status filtering, and lifecycle tracking across Draft, Under Review, Approved, and Published states.
- Built reusable Angular components, services, routing, forms, and dashboard modules, with LocalStorage-based data persistence during the frontend development phase.
- Designed the application architecture for Spring Boot REST APIs and MySQL integration, with an AI Assistant interface for insurance product information and application support.

Java Developer Intern – Pratinik Infotech Pune, India

Jun 2025 – Aug 2025

- Built a Student Grade Management System using **Java and JDBC** with complete CRUD functionality for academic record management.

- Designed a normalized database schema and improved backend query logic for efficient student record retrieval.
- Delivered the complete system within an **8-week internship** while meeting functional requirements.

Projects

Face Emotion Detection

Python, CNN, VGG16/VGG19, Transfer Learning

- Built a real-time facial emotion recognition system using CNN and fine-tuned VGG16/VGG19 transfer-learning models for multi-class classification.
- Applied computer vision preprocessing and image classification techniques to improve model inference on facial expressions.

Image Caption Generator

Python, CNN-LSTM, Deep Learning

- Implemented a CNN encoder and LSTM decoder sequence-to-sequence architecture to generate natural-language captions for input images.
- Worked with image feature extraction, sequence modeling, and language generation techniques for multimodal AI tasks.

Drowsiness Detection System

Python, OpenCV, Dlib

- Developed a real-time driver fatigue detection system by tracking eye-aspect ratio using Dlib facial landmarks from live video.
- Used OpenCV-based image processing for frame capture, facial landmark detection, and alert generation.
