Professional Summary

B.Tech Computer Science Engineering student at **K L University**, graduating in 2027, specializing in **Artificial Intelligence and Visual Intelligence**. Aspiring Software Developer seeking opportunities in MNCs, with hands-on experience in **Java backend development, full-stack applications, REST APIs, SQL, Data Structures and Algorithms, OOP, DBMS, and AI/ML**. Experienced in building database-backed software applications and AI-based projects, with a strong interest in scalable and reliable software development.

Education

K L University , Hyderabad	2023–2027
B.Tech in Computer Science Engineering – AI & Visual Intelligence	GPA: 8.56/10
Narayana Junior College , Hyderabad	2021–2023
Intermediate (Class XII)	GPA: 8.21
Sri Chaitanya Techno School , Hyderabad	2019–2021
High School (Class X)	GPA: 10.0

Technical Skills

Programming: Java, Python, JavaScript, TypeScript
Core: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Full-Stack Development
Backend: JDBC, REST APIs, Node.js
Frontend: React, HTML, CSS, Tailwind CSS
Database: SQL, MySQL
Tools: Git, GitHub, VS Code
AI/ML: Machine Learning, Deep Learning, Computer Vision, OpenCV, TensorFlow/Keras, CNN, LSTM, VGG16, VGG19

Work Experience

Tech Mahindra <i>Software Development Intern</i>	Hyderabad, India May 2026 – Sep 2026
Product Inventory Management System	Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, Angular, TypeScript GitHub
- Developed a full-stack Product Inventory Management System using Java, Spring Boot, Angular, and MySQL to manage product records through end-to-end CRUD operations. - Implemented RESTful APIs with Spring Boot, Spring Data JPA, and Hibernate for product creation, retrieval, updating, deletion, search, category filtering, and pagination. - Built a responsive Angular frontend with TypeScript and Bootstrap, integrating product management, input validation, search, filtering, and paginated views. - Integrated MySQL for persistent product data management and used Swagger UI and Postman for API documentation and testing.	
Insurance Product Inventory Management System	Angular, TypeScript, Spring Boot, MySQL, REST APIs GitHub
- Developed a modular insurance product management platform with Angular and TypeScript covering product catalog, product lifecycle workflow, categories, product managers, analytics, profile, and authentication modules. - Implemented product CRUD operations with search, category and status filtering, and lifecycle tracking across Draft, Under Review, Approved, and Published states. - Built reusable Angular components, services, routing, forms, and dashboard modules, with LocalStorage-based data persistence during the frontend development phase. - Designed the application architecture for Spring Boot REST APIs and MySQL integration, with an AI Assistant interface for insurance product information and application support.	
Pratinik Infotech <i>Software Development Intern</i>	Pune, India Jun 2025 – Aug 2025
- Built a Student Grade Management System using Java and JDBC with complete CRUD operations for academic record management. - Designed a normalized MySQL database schema and optimized query logic for efficient student record retrieval. - Applied Object-Oriented Programming and database connectivity concepts to develop a reliable backend application.	

Projects

Daily Expense Tracker	React.js, TypeScript, Tailwind CSS, REST APIs
------------------------------	---

- Developed a full-stack expense management application with user authentication, expense categorization, dashboard analytics, and responsive UI.
- Integrated Chart.js for spending visualization, REST API synchronization, form validation, and multi-user expense tracking.

Inventory Management System

React.js, Node.js, MySQL, REST APIs

- Developed a full-stack educational supply and inventory platform with authentication, product browsing, cart functionality, inventory tracking, and role-based access.
- Integrated REST APIs and MySQL connectivity to support stock monitoring and efficient frontend-backend communication.

Image Caption Generator

Python, CNN-LSTM, Deep Learning

- Implemented a CNN encoder and LSTM decoder sequence-to-sequence architecture to generate natural-language captions for input images.

Face Emotion Detection

Python, CNN, VGG16/VGG19, Transfer Learning

- Built a real-time facial emotion recognition system using CNN and fine-tuned VGG16/VGG19 models for multi-class emotion classification.

Drowsiness Detection System

Python, OpenCV, Dlib

- Developed a real-time driver fatigue detection system by tracking eye-aspect ratio using Dlib facial landmarks from live video feed with OpenCV.
